

SSL Inspection

Event Date is in the last 1 complete day Hostname/Domain is not <Hostname/Domain>

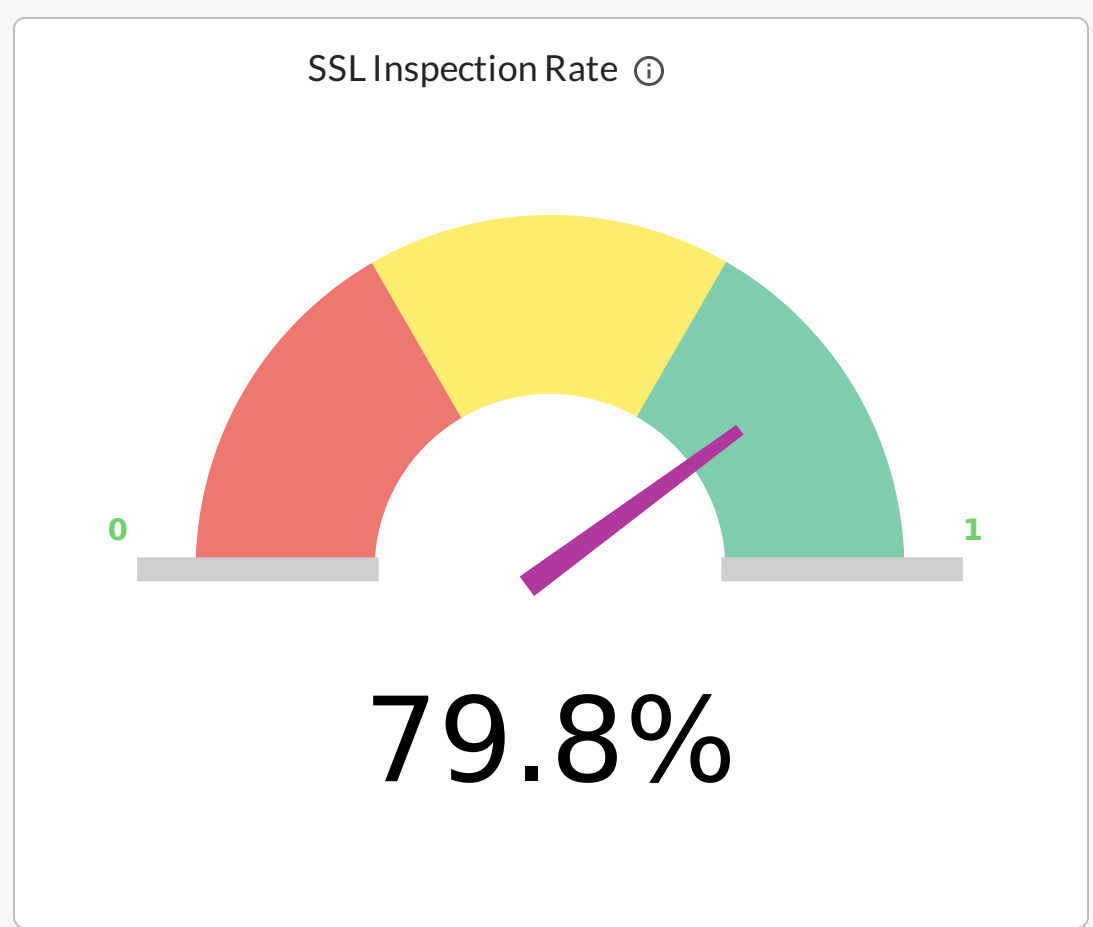

Why SSL Inspection?

- SSL inspection ensures the ability to scan content for threats (malware), or perform DLP.
- It helps you review traffic and destinations that are not inspected, and assess whether there is a business reason to have content inspected for threats, intellectual property, or against specified standards.
- Ideally, all traffic sent to Netskope should be SSL decrypted so the content can be scanned.
- Traffic with some particular hostnames/domains may be bypassed on purpose, so we recommend filtering out those hostnames/domains for a more accurate result. You can do this using the "Hostname/Domain" dashboard level filter above. Please note that this filter only applies to following widgets:
 - Domains without SSL Inspection
 - Events without SSL inspection
 - Total Bytes without SSL Inspection
 - Top Hostnames/Domains without SSL Inspection
 - SSL Inspection Rate.
